

**IB-DK2108M-C**
**Order Number** 60794    **EAN Number** 4250078171300

## EXTRA

You wouldn't have expected that, would you?

Do you know that you may have a smart device that can be used as a desktop computer together with this DockingStation? **Samsung®** and **Huawei®** are showing the way:

**Desktop Experience**, or **DeX** for short, and **Easy Projection** allow you to use input devices, storage media and built-in **NVMe SSD** connected to and supported by the **IB-DK2108M-C**, as well as an **HDMI®**-enabled display device - on a separate desktop surface!

Have you ever asked yourself why you need to buy/use an additional computer when you are already the proud owner of a powerful **smart device**?

For common **office applications**, **video streaming** and all the other **apps** that have become an integral part of daily life, a **supported smart device** is often sufficient for daily needs, even at home on your large monitor.

**HDMI®**

**USB Interfaces**

**PD Charging**

**M.2 NVMe SSD**

At home or in the office, you just maintain the connection between the **IB-DK2108M-C** and an **HDMI® monitor, mouse, keyboard, memory cards** and a **Type-C® power supply** and as soon as you return, you simply plug the **USB Type-C®** host cable of the DockingStation into your smart device and voilà, the respective desktop application opens on the connected monitor, while your smart device continues to stay in the familiar display mode.

Using and operating the desktop interface via mouse and keyboard allows you to work like on a conventional computer, and accessing and exchanging data to/from connected external storage media also go hand in hand.

If the (optional) power supply unit mentioned above is connected, the smart device is also charged via the **Power Delivery function** - what more could you want!

### Compatible models:

**SAMSUNG DeX:** Galaxy S10+, Galaxy S10, Galaxy S10e, Galaxy Note9, Galaxy S9 series, Galaxy Note8, Galaxy S8 series and newer.

**Huawei Easy Projection:** Mate 10 Pro (including Porsche Design special editions), P20, P20 Pro and newer.

Also compatible are newer device releases that support this technology.

By the way, when connected to the iPad Pro, its display is only mirrored, but this could also be interesting for some.

**P.S.** All these advantages can of course also be used in combination with your existing **USB Type-C® DP Alt Mode** supported **Windows®** or **macOS®** computer, so feel free to keep it if you still have it. This usually only applies to the higher-priced models of the newer generation, but they are very widespread.
